

Knowledge to Shape Your Future

Fluxi 2000/TZ

Turbine Gas Meter

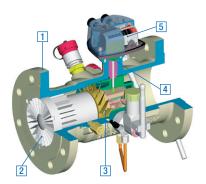

Turbine gas meters are flow meters. The flow of gas turns a turbine wheel, and thus, the rotating speed of the turbine is proportional to the linear speed of the gas.

The movement is mechanically transmitted to the totaliser through the magnetic coupling.

Description

The Fluxi 2000/TZ meter is composed of five main parts:

- > a body containing all the components (1);
- > a flow straightener to stabilise and accelerate the gas flow before the turbine wheel (2);
- > a measuring unit including the turbine wheel (3);
- > a magnetic coupling to transmit the movement of the turbine wheel to the totaliser (4);
- > a totaliser to register the measured gas (5).

Applications

Fluxi 2000/TZ meters are designed to measure natural gas, and various filtered, and non-corrosive gases. They are used to measure medium to high gas flow, at low, medium or high pressure. The Fluxi 2000/TZ meters have been optimised for use in all applications related to the transportation and distribution of gas. Fluxi 2000/TZ meters are approved for fiscal use.

Features

Metrological approvals	EC (PTB): 1.33-3271.51-ROM-E04.					
	Compliant with the Measuring Instrument Directive 04/22/EC					
Intrinsic safety approval	L.C.I.E. 06 ATEX 6031 X					
ilitilisic salety approvai						
	Compliant with the Directive 94/9/EC					
Flow rate	From 5 m ³ /h to 10000 m ³ /h, G65 to G6500.					
Nominal diameters	From DN50 to DN500 mm (2" to 20").					
Maximum working pressure	up to 100 bar depending on the body material and flanging.					
Mounting	The Fluxi 2000/TZ meters can be installed either horizontally or vertically,					
	for the DN50 to DN300, and horizontally for the DN400 and DN500.					
Body materials	Ductile iron, cast steel or welded steel.					
·	Compliant with the Pressure Equipment Directive 97/23/EC					
Temperature range	PED: -30°C to +60°C					
	MID: -25°C to +55°C					
	Storage temperature: -40°C to +70°C					

Metrology

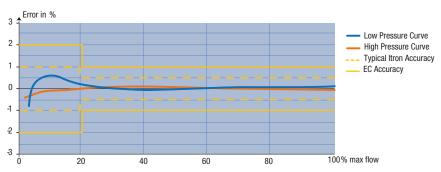

In accordance with the EC regulation and OIML. Depending on the G size and the DN, the meters are available with a rangeability of 1:20 or 1:30. According to the PTB TR G7, for high-pressure tests, the rangeability can be extended to 1:50, depending on the pressure.

In line with EC regulation, the maximum permissible error is +/-2 %, from Qmin to 0.2 Qmax, and +/-1% from 0.2 Qmax to Qmax. The WME (Weighted Measured Error) is less than 0.4%.

Typical Itron accuracy is +/-1% from Qmin to 0.2 Qmax, +/-0.5% from 0.2 Qmax to Qmax.

- > PTB approved with only 2 DN inlet straight pipe, 0 (zero) DN outlet pipe even with severe perturbations
- > MID approved
- > Go beyond compliance with all current European and International Standards
- > Reduced pressure loss for low pressure network
- > Excellent high-pressure behaviour
- > IP 67 protection of the totaliser
- > Equipped as standard with the cyble target.
- > Various options available: integrated thermowells, oil pump, pulse transmitters, etc

> Turbine Gas Meter Fluxi 2000/TZ DN80 ISO PN16 G160

Totaliser:

- 9-digit index to register a larger volume
- 45° orientation for an easy reading
- Free-rotating totaliser
- Equipped as standard with the cyble target: it allows the installation of the cyble sensor at any time.
- Equipped with 1 built-in silicagel cartridge; as an option, equipped with an external cartridge to enable easy maintenance even in extreme conditions
- Fitted with a reflecting disc on the first drum.
- Integrated optical disc to facilitate the periodic calibration of the meter.

- Customised name plate (logo, bar-code, customer serial number...)
- IP67 protection
- UV resistant
- Unit: m³

Universal totaliser fitted as standard with the Cyble target

- 1 Cyble sensor: It can be delivered mounted onto the meter or installed afterwards at any time. The Cyble sensor is a bounce-free transmitter. It allows also the counting of eventual back flows.
- 2 Low Frequency (LF): Two Reed switches are fitted as standard on the whole range. Anti-tampering (AT): this device is fitted as standard on the whole range.
- **3** Medium Frequency (MF): one transmitter is supplied as an option.
- **4** High Frequency (HF): up to 3 transmitters are supplied as an option on the whole range:
 - 2 fitted close to the turbine wheel (HF3), and 1 close to a reference wheel (HF2).
- 5 Mechanical drive: the totaliser can be fitted with this option, it may be used to drive removable accessories. The mechanical drive is designed according to EN 12261.

Oil pump

6 An oil pump is supplied as an option, which lubricates the main ball bearings in the measuring unit. The oiling can be done even when the meter is under pressure.

Turbine wheel

7 This is the most important component of the meter for achieving high accuracy at low and high pressure. It can be made from aluminium for the whole range or in polyacetal for the DN≤200. Depending of the G size, the blades of the turbine wheel are oriented at 45° or 60°. Turbine wheel at 60° is used to avoid overspeed of the wheel.

When a HF3 is requested, the wheel must be in aluminium.

For high pressure use, or for measuring dirty gases, an aluminium wheel is recommended.

Flow Straightener

8 This device stabilises and accelerates the flow before the turbine wheel. It has been designed to meet the requirements of the 2 perturbation tests defined in the EN12261 (low level and high level perturbation). All DN meet the requirements of the low level perturbation test without an additional device with only 2 DN inlet straight pipe, 0 DN outlet of the meter.

From DN50 to DN150, no additional device is required to fulfil the high level perturbation test with only 2 DN inlet, 0 DN outlet of the meter.

From DN200 to DN400, a flow conditioner has to be integrated in the inlet of the flow straightener to meet the requirements of the high level perturbation test when only 2 DN inlet pipe is available (see in § Accessories). The large number of blades fitted in the flow straightener insures an optimal protection in case of perturbated flow.

Options:

Extension for the totaliser

9 This option allows the possibility of increasing the distance between the body of the meter and the index, to facilitate the reading when the meter is covered with ice due to measurement of gas at low temperatures.

Pressure tapping:

This device allows the gas pressure to be measured at the reference point. It is installed as standard. The standard pressure tapping is an Ermeto 6S.

9

Measurement of aggressive gases:

A version with a PTFE (Teflon) coating is available, as an option.

Accessories

Bracket for mounting a volume converter

This device allows the Itron PTZ volume converter to be adapted directly onto the meter.

Thermowells

This device allows the temperature of the measured gas to be read at the reference point, downstream of the turbine.

The meter is prepared as standard for the installation of two thermowells which can be mounted in our factory or later when requested. The meter does not need to be recalibrated after retrofitting of thermowell (as defined in the PTB type Approval).

Flow conditioner

For DN50 to DN200, a flow conditioner can be supplied for installation between 2 RF flanges in front of the meter, to further enhance the performance of the meter when subjected to severe perturbation.

For DN200 to DN400, the flow conditioner can be retrofitted directly in the inlet of the flow straightener. The integration of the flow conditioner in the meter provides a very compact solution without need for any extra flanging.

External silicagel cartridge

This accessory is used to reinforce the protection of the totaliser against humidity when the meter is installed in extrem conditions.

> Fluxi 2000/TZ with PTZ CORUS

E) Transmitter characteristics

Intrinsic safety approval: L.C.I.E. 06 ATEX 6031 X Intrinsic safety level: \bigcirc II 1/2 G Ex ia IIC T5 c T6

Low Frequency pulse transmitter (LF):

The LF transmitter consists of 2 dry Reed switches, normally open, and controlled by a magnet situated in the first drum of the totaliser. The LF connections are without polarity.

Characteristics of LF transmitter:

- > Hermetically sealed contacts
- Maximum terminal voltage: 30 Volt and maximum current according to EN 60079-11.
- > Maximum temperature: +60°C
- > Minimum pulse time: 0.4 sec
- > Cyble sensor: It conforms to CENELEC standard EN 60079-11 with:
 - Ui \leq 14.3 Volt
 - Ii ≤ 50 mA

Inductive transmitters (MF and HF):

They are inductive sensors actuated by a toothed disc. The frequency is proportional to the instantaneous flow. The polarity of the connections is indicated on the name plate of the meter.

Characteristics of MF and HF transmitters:

- > Proximity detector conform to EN 60947-5-6 (NAMUR) standards
- > They conform to CENELEC standards (EN 60079-0 and EN 60079-11) with:
 - Ui ≤ 16 Volt
 - Ii ≤ 52 mA
 - Ci ≤ 50 ηF
 - Li ≤ 250 μ H
 - Pi ≤ 64 mW
- > Maximum temperature: + 60°C

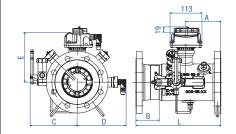

Anti-tampering transmitter (AT):

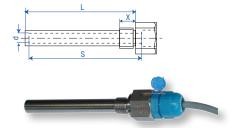

This consists of one dry Reed switch, normally closed. Attempts at magnetic tampering will open the contact. The electrical characteristics are the same as those for the LF transmitter.

F) Installation

Each meter is delivered with binder plugs for the installed transmitters and oil when an oil pump is installed. Please refer to the instruction manual supplied with the meter.

The advice given therein will ensure optimal use of the Fluxi 2000/TZ meter over the years.
