## POLYVALVE - Ball Valve

## Technology for the Future

- Body and spigot ends are manufactured using the latest PE100 material.(Exception d225-PE80)
- W all thickness corresponds to SDR 11: Pressure Rating PN 16 (W ater),PN 10 (G as)
- Seals are made from gas resistant $N$ BR, suitable for $G$ as, $W$ ater and Sewage applications
- Product Range for d20 to d 225: Spherical Valve d20-d40, Ball Valve d50-d225
- Valve ball is manufactured from Polypropylene, the valve sphere from Acetal
- Full Bore range available for most common dimensions.
- Values for Standard Valves

## The Step to a Full PE Network

- Safe and quick connections to the PE pipe network with Electro- or Butt Fusion. There is no other more economical way to install a system from one material.
- The total pipe network has the same properties. Every link in the chain reacts the same as the previous one the effects of the environment and of the transported media are the same for all components. There are no potential weal links in the system.
- W hat can show the quality of a product better than 25 years experience and more that 3 million PE Ball Valves installed?
- Valve position (open/ closed) is shown, in addition valve is protected from over tightening through misuse.
